

The "InjuryVolume.xls" file contains the following working sheets:

RA2: remaining voxel numbers of the 2nd images for different rats in the real acupuncture group;
RA3: remaining voxel numbers of the 3rd images for different rats in the real acupuncture group;
SA2: remaining voxel numbers of the 2nd images for different rats in the sham acupuncture group;

SA3: remaining voxel numbers of the 3rd images for different rats in the sham acupuncture group;
BC2: remaining voxel numbers of the 2nd images for different rats in the blank control group;
BC3: remaining voxel numbers of the 3rd images for different rats in the blank control group;

RI_RA: injury volume change index values of different rats in the real acupuncture group;

RI_SA: injury volume change index values of different rats in the sham acupuncture group;

RI_BC: injury volume change index values of different rats in the blank control group.

In the above working sheets, the first row denotes the threshold T values (from 70% to 120%).

The following three sheets contain the total number of voxels in the three successive slides:

RA total voxel: the total number of voxels for each rat in the real acupuncture group;

SA total voxel: the total number of voxels for each rat in the sham acupuncture group;

BC total voxel: the total number of voxels for each rat in the blank control group.
